Athens, GA

Nov 2017 – May 2018

PROJECTS

HUNGRY HELPER

- Google Home application that interprets the menus on the UGA's Build Your Plate website and parses for matching keywords based on type of food and phrases said. Tells you what's for breakfast or if a food you want is at the dining hall.
- Built and collaborated with at UGHacks with Actions on Google, DialogueFlow, and JSON.

Spring 2018

LANGUAGE AI

- Created a chatbot to simulate human conversation. Rewrote a language learning AI from scratch using an algorithm to store recognized phrases and links leading to machine learning.
- Built with Java and trained with text files of phrases and scanner inputs. Collaborated on with a partner in a Git repository

Summer 2017

TIMFACTS

- iOS app that outputs scenes of random fun facts and images about myself with each press of a button
- Solo project built with Swift and XCode to learn functional programming and iOS development

Spring 2017
